

AMENDMENTS TO THE ABSTRACT

Please amend the Abstract as follows:

A process for rapid data recovery, data cleaning and an automated self-maintenance of the data recovery mechanism is provided. Dirty input data records are used in conjunction with and to build and revise a fast indexing table wherein index keys point to clean data records with which the input data should be rightly associated. Mechanisms for automated revision of the indexing table are described. ~~Said table forms a tool useful in data mining and knowledge discovery to analysis of heuristic processes.~~
